

WELCOME TO MADISON

Water & Wastewater Board of the City of Madison 2019 Drinking Water Quality Report

We are pleased to present our annual Drinking Water Quality Report. We designed this report to inform you about the quality of your drinking water. Our goal is to deliver water that meets regulatory requirements and your expectations for safety, quality, and reliability. If you have questions about the report, please contact Jason Leggett at 256-772-0253 ext. 119 between the hours of 8:00 a.m. to 4:00 p.m. Monday through Friday. Our Board meetings are on the first and third Monday (unless otherwise posted) of each month at 5:30 p.m. in the conference room of Madison Utilities located at 101 Ray Sanderson Drive.

Health Information about Water

The sources of drinking water include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and radioactive material, and it can pick up substances resulting from the presence of animals or from human activity.

To ensure that tap water is safe to drink, the Environmental Protection Agency (EPA) prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. The Food and Drug Administration (FDA) establishes limits for contaminants in bottled water.

Some people may be more vulnerable to contaminants in drinking water than the general population. People who are immuno-compromised, such as cancer patients undergoing chemotherapy, organ transplant recipients, HIV/AIDS positive or other immune system disorders, some elderly, and infants can be particularly at risk from infections. People at risk should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

All surface water systems are required to test untreated, raw source water for Cryptosporidium. Cryptosporidia are microscopic organisms found in surface water throughout the world. These pathogens are common in surface water because of vulnerability to sewage discharges and runoff. Cryptosporidium was detected in raw water in 2019 in a range of 0-0.20 calculated organisms per liter. Cryptosporidium was *not* detected in our finished water.

Ingesting cryptosporidium can cause gastrointestinal illness with potential increased risk of infection for immunocompromised persons such as individuals with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, the elderly, and infants. For people who may be immuno-compromised, a guidance document developed jointly by the Environmental Protection Agency and the Center for Disease Control is available online at www.epa.gov/safewater/crypto.html or from the Safe Drinking Water Hotline at 800-426-4791.

Consumers should be aware that all drinking water, including bottled water, might reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

LEAD: Elevated levels of lead can cause serious health problems, especially for pregnant women, infants, and young children. NEVER make baby formula with warm or hot tap water.

Lead is rarely found in source water. If lead is present in tap water, it is primarily from corrosion of materials that were used in older plumbing, solder that connects pipes, or from pipes connecting a house to the main water pipe in the street. Lead is no longer used in manufacturing these products, but plumbing components containing lead may still remain in some older homes and buildings. When water sits for several hours in pipes containing these older materials, lead can leach into the water.

Your water system is responsible for providing high quality drinking water but cannot control the variety of materials that were used in household plumbing. The EPA and the CDC make the following recommendations:

- Before using any tap water for drinking or cooking, flush your water system by running the kitchen tap (or any other tap you take drinking or cooking water from) on COLD for 1–2 minutes. Flushing can minimize the potential for lead exposure, especially if the water has been sitting undisturbed for several hours, as in overnight.
- In all situations, especially for making baby formula, drink or cook only with water that comes out of the cold tap. Warm or hot tap water is more likely to cause lead to leach from plumbing materials. Boiling this water will NOT reduce the amount of lead in your water.
- Also, periodically remove the aerator on the tip of the faucet and wash out any debris such as metal particles.

If you are still concerned about lead in your water after following the recommendations above, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water hotline at 800-426-4791 and from CDC at <http://www.cdc.gov/nceh/lead/tips/water.htm>.

Routine Monitoring

Madison Utilities routinely monitors for contaminants in your drinking water in accordance with Federal and State regulations. The EPA or ADEM requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. The ADEM provides us with a regulatory monitoring schedule each year.

Based on a study conducted by the ADEM with approval of the EPA, a statewide waiver for monitoring asbestos and dioxin was issued. Thus, monitoring for any of these contaminants was not required.

This report contains results from our most recent monitoring which was performed in accordance with the regulatory schedule.

Contaminant Groups Monitored	Regulatory Schedule
Inorganic Contaminants	2019
Lead/Copper	2019
Microbiological Contaminants	current
Nitrates	2019
Radioactive Contaminants	2019
Synthetic Organic Contaminants	2019
Volatile Organic Contaminants	2018-2019
Disinfection By-products (DBPs)	2019
Cryptosporidium	2019
UCMR4 Contaminants	2015
Distribution System Evaluation DBPs	2019

Primary Drinking Water Contaminants

Contaminant	Units	MCL	MD	Contaminant	Units	MCL	MD
Bacteriological Contaminants				Organic Contaminants (cont.)			
Total Coliform Bacteria		<5%	0	Chlordane	ppb	2	ND
Turbidity	NTU	TT	0.129	Chlorobenzene	ppb	100	ND
Fecal coliform and <i>E. coli</i>		0	0	2,4-D	ppb	70	ND
Fecal Indicators (enterococci or coliphage)		TT	0	Dalapon	ppb	200	ND
Radiological Contaminants				Dibromochloropropane	ppt	200	ND
Alpha emitters	pCi/L	15	ND	1,2-Dichloroethane	ppb	5	ND
Combined Radium	pCi/L	5	ND	1,2-Dichloropropane	ppb	5	ND
Disinfections and Disinfection Byproducts				Dinoseb	ppb	7	ND
Chlorine	ppm	MRDL=4	2.7	Diquat	ppb	20	ND
TTHM (Total Trihalomethanes)	ppb	80	69.9	Endothall	ppb	100	ND
Haloacetic Acids (HAA5)	ppb	60	40.6	Endrin	ppb	2	ND
Inorganic Contaminants				Ethylbenzene	ppb	700	ND
Antimony	ppb	6	ND	Ethylene Dibromide	ppt	50	ND
Arsenic	ppb	10	1.38	Glyphosate	ppb	700	ND
Barium	ppm	2	0.022	Heptachlor	ppt	400	ND
Beryllium	ppb	4	ND	Heptachlor Epoxide	ppt	200	ND
Cadmium	ppb	5	ND	Hexachlorobenzene	ppb	1	ND
Chlorine, Residual	ppm	4	2.4	Hexachlorocyclopentadiene	ppb	50	ND
Chromium	ppb	100	ND	Lindane	ppt	200	ND
Copper, 90th percentile	ppm	AL=1.3	0.054	Methoxychlor	ppb	40	ND
Cyanide	ppb	200	ND	Oxamyl (Vydate)	ppb	200	ND
Fluoride	ppm	4	0.66	Pentachlorophenol	ppb	1	ND
Lead, 90th percentile	ppm	AL=0.015	0.001	Polychlorinated Biphenyls (PCBs)	ppt	500	ND
Mercury	ppb	2	ND	Picloram	ppb	500	ND
Nitrate	ppm	10	0.52	Simazine	ppb	4	0.53
Nitrite	ppm	1	ND	Styrene	ppb	100	ND
Nitrate-Nitrite (Total)	ppm	10	0.546	Toluene	ppb	1000	ND
Selenium	ppb	50	ND	TOC (Total Organic Carbon)	ppm	TT	1.29
Thallium	ppb	2	ND	Toxaphene	ppb	3	ND
Organic Contaminants				2,4,5-TP (Silvex)	ppb	50	ND
Alachlor	ppb	2	ND	1,2,4-Trichlorobenzene	ppb	70	ND
Atrazine	ppb	3	ND	Trichloroethylene (Trichloroethene)	ppb	5	2.26
Benzene	ppb	5	ND	1,1,1-Trichloroethane	ppb	200	ND
Benzo(a)pyrene (PAHs)	ppt	200	ND	1,1,2-Trichloroethane	ppb	5	ND
Carbofuran	ppb	40	ND	Vinyl chloride	ppb	2	ND
Carbon tetrachloride	ppb	5	ND	Xylenes, Total	ppb	10000	ND

Secondary Contaminants

Contaminant	Units	MCL	MD	Contaminant	Units	MCL	MD	Contaminant	Units	MCL	MD
Alkalinity, Total	ppm	N/A	53.9	Copper	ppm	1.0	ND	Odor	odor #	3	4
Aluminum	ppm	0.2	ND	Hardness	ppm	N/A	68.7	Nickel	ppm	N/A	ND
Calcium	ppm	N/A	21.1	Iron	ppm	0.30	ND	pH	S.U.	6.5-8.5	7.5
Carbon Dioxide	ppm	N/A	ND	Magnesium	ppm	N/A	4.44	Silver	ppm	0.10	ND
Chloride	ppm	250	9.58	Manganese	ppm	0.05	ND	Sodium	ppm	N/A	8.47
Color	pcu	15	1	MBAS	ppm	0.5	ND	Specific Conductance	µs/cm	N/A	175
								Sulfate	ppm	250	9.54
								Total Dissolved Solids	ppm	500	97.0
								Zinc	ppm	5	ND

UCMR4 Monitoring

Every five years the EPA issues a new list of unregulated contaminants and requires some water systems to monitor for them. In the fourth UCMR cycle, the Unregulated Contaminant Monitoring Rule 4 (UCMR4) required PWSs serving more than 10,000 people to monitor for 30 unregulated contaminants over a three year span, with each PWS assigned a monitoring period. The adjacent table shows the UCMR4 contaminants we monitored in 2019 and the results from that monitoring.

UCMR 4 Contaminants								
Contaminant	Unit	Level	Contaminant	Unit	Level	Contaminant	Unit	Level
	Msmt	Detected		Msmt	Detected		Msmt	Detected
Germanium	ppb	ND	Tebuconazole	ppb	ND	Quinoline	ppb	ND
Manganese	ppb	ND	Total permethrin (cis- & trans-)	ppb	ND	Total organic carbon	ppb	1820
Alpha-hexachlorocyclohexane	ppb	ND	Tribufos	ppb	ND	Bromide	ppb	24.7
Chlorpyrifos	ppb	ND	1-butanol	ppb	ND	HAA5	ppb	32.7
Dimethipin	ppb	ND	2-methoxyethanol	ppb	ND	HAA6Br	ppb	20.8
Ethioprop	ppb	ND	2-propen-1-ol	ppb	ND	HAA9	ppb	36.2
Oxyfluorfen	ppb	ND	Butylated hydroxyanisole	ppb	ND			
Profenofos	ppb	ND	O-toluidine	ppb	ND			

Unregulated Contaminants

Contaminant	Units	MD	Contaminant	Units	MD	Contaminant	Units	MD
Aldicarb	ppb	ND	Chloromethane	ppb	ND	Isopropylbenzene	ppb	ND
Aldicarb Sulfone	ppb	ND	2-Chlorotoluene	ppb	ND	p-Isopropyltoluene	ppb	ND
Aldicarb Sulfoxide	ppb	ND	4-Chlorotoluene	ppb	ND	Methomyl	ppb	ND
Aldrin	ppb	ND	Dibromoacetic Acid	ppb	ND	Methyl tert-butyl ether	ppb	ND
Bis(2-ethylhexyl)adipate	ppb	ND	Dibromomethane	ppb	ND	Methylene chloride	ppb	ND
Bis(2-ethylhexyl)phthalate	ppb	ND	Dicamba	ppb	ND	Metolachlor	ppb	ND
Bromoacetic Acid	ppb	ND	Dichloroacetic Acid	ppb	ND	Metribuzin	ppb	ND
Bromobenzene	ppb	ND	1,2-Dichlorobenzene	ppb	ND	Naphthalene	ppb	ND
Bromochloromethane	ppb	ND	1,3-Dichlorobenzene	ppb	ND	1-Naphthol	ppm	ND
Bromodichloromethane	ppb	8.45	1,4-Dichlorobenzene	ppb	ND	Paraquat	ppm	ND
4-Bromofluorobenzene	% Rec	ND	1,2-Dichlorobenzene-d4	% Rec	ND	Propachlor	ppb	ND
Bromoform	ppb	ND	Dichlorodifluoromethane	ppb	ND	n-Propylbenzene	ppb	ND
Bromomethane	ppb	ND	1,1-Dichloroethane	ppb	ND	1,1,1,2-Tetrachloroethane	ppb	ND
Butachlor	ppb	ND	1,1-Dichloroethene	ppb	ND	1,1,2,2-Tetrachloroethane	ppb	ND
n-Butylbenzene	ppb	ND	cis-1,2-Dichloroethene	ppb	ND	Tetrachloroethene	ppb	ND
sec-Butylbenzene	ppb	ND	trans-1,2-Dichloroethene	ppb	ND	Trichloroacetic Acid	ppb	ND
tert-Butylbenzene	ppb	ND	1,3-Dichloropropane	ppb	ND	1,2,3-Trichlorobenzene	ppb	ND
Carbaryl	ppb	ND	2,2-Dichloropropane	ppb	ND	Trichloroethene	ppb	ND
Free Carbon Dioxide	ppm	ND	1,1-Dichloropropene	ppb	ND	Trichlorofluoromethane	ppb	ND
Chloroacetic Acid	ppb	ND	1,3-Dichloropropene	ppb	ND	1,2,3-Trichloropropane	ppb	ND
Chlorodibromomethane	ppb	1.40	Dieldrin	ppb	ND	1,2,4-Trimethylbenzene	ppb	ND
Chloroethane	ppb	ND	Hexachloro-1,3-butadiene	ppb	ND			
Chloroform	ppb	32.0	3-Hydroxycarbofuran	ppb	ND			

DETECTED CONTAMINANTS

The presence of contaminants does not necessarily indicate that water poses a health risk. MCL's, defined in the "Key to Tables" in this report, are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

Table of Detected Contaminants

Primary Contaminants	Units	Violation	MCLG	MCL	Max	Min	Major Sources
Arsenic	ppb	No	0	10	1.38	<1	Erosion of natural deposits; Runoff from orchards; Runoff from grass and electronics production wastes
Barium	ppm	No	2	2	0.022	0.022	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Chlorine, Residual	ppm	No	MRDLG=4	MRDL=4	2.7	1.24	Water additive used to control microbes
Copper	ppm	No	1.3	AL=1.3	0.054 ¹	N/A	Corrosion of household plumbing systems
Fluoride	ppm	No	4	4	0.66	0.66	Water additive which promotes strong teeth; Erosion of natural deposits; Discharge from fertilizer and aluminum factories
Lead	ppm	No	0	AL=0.015	0.001 ²	N/A	Corrosion of household plumbing systems
Nitrate	ppm	No	10	10	0.52	0.49	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
TOC (Total Organic Carbon)	ppm	No	N/A	TT	1.29	0.87	Naturally present in the environment
Total Haloacetic Acids (HAA5)	ppb	No	0	60	40.6	9.68	By-product of drinking water disinfection
Total Trihalomethanes (TTHM)	ppb	No	0	80	69.9	10.6	By-product of drinking water chlorination
Turbidity	NTU	No	N/A	5	0.129	N/A	Soil runoff
Trichloroethylene (Trichloroethene)	ppb	No	0	5	2.26	ND	Discharge from metal degreasing sites and other factories
DSE³ Disinfection Byproducts							
Total Haloacetic Acids (HAA5)	ppb	N/A	N/A	N/A	52.1	11.3	By-product of drinking water disinfection
Total Trihalomethanes (TTHM)	ppb	N/A	N/A	N/A	39.1	11.1	By-product of drinking water chlorination

Secondary Contaminants	Units	MCL	MD	Secondary Contaminants (cont'd)	Units	MCL	MD
Alkalinity, Total	ppm	N/A	53.9	Sodium	ppm	N/A	8.47
Calcium	ppm	N/A	21.1	Specific Conductance	umhos/cm	N/A	175
Chloride	ppm	250	9.58	Sulfate	ppm	250	9.54
Color	ppm	15	1	Total Dissolved Solids	ppm	500	97.0
Hardness, Total (ppm as CaCO3)	ppm	N/A	68.7	Unregulated Contaminants			
Magnesium	ppm	N/A	4.44	Bromodichloromethane	ppb	N/A	8.45
Odor	T.O.N.	3	4	Chlorodibromomethane	ppb	N/A	1.40
pH (On Site)	su	6.5-8.5	7.5	Chloroform	ppb	N/A	32.0

¹ Figure reported is 90th percentile, and the number of sites with detects over the Action Level (1.3 ppm) = 0

² Figures shown is 90th percentile, and the number of sites with detects over the Action Level (0.015 ppm) = 0

³ A Distribution System Evaluation (DSE) is a 4-quarter monitoring study to identify distribution system locations with higher concentrations of THMs and HAA5s.

WATER SOURCE AND TREATMENT

In March of 2018, Madison Utilities (MU) began pumping water from our new source, the Terris Tatum Tennessee River Intake Facility, which is treated at the Quarry Water Treatment Plant (QWTP) using aeration, coagulation, filtration, disinfection and the addition of fluoride. The river intake serves as the primary source, with additional water occasionally supplied from the Drake Well and treated at the QWTP during high demand in summer months. We have several other groundwater wells that can be treated and utilized as back-up sources if needed. Our Keene water treatment plant is not in operation currently but is maintained so that it can be put into use if necessary. Interconnections are maintained with Huntsville Utilities and with Harvest Monrovia Water System. Our distribution system utilizes four water storage facilities with a total capacity of 12,000,000 gallons and water mains to serve approximately 17,700 customers.

Monitoring Non-Compliance Notice

The Water and Wastewater Board of the City of Madison, dba Madison Utilities (MU) is required to monitor the source of your drinking water for cryptosporidium. Results of the monitoring are to be used to determine whether water treatment at the MU treatment plant is sufficient to adequately remove cryptosporidium from your drinking water. We are required to complete this monitoring and make this determination by March 31, 2021. We did not monitor or test on schedule and, therefore, we may not be able to determine by the required date what treatment modifications, if any, must be made to ensure adequate cryptosporidium removal. Missing this deadline may, in turn, jeopardize our ability to have the required treatment modifications, if any, completed by the deadline required.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

Madison Utilities entered into a contract with a consultant laboratory to perform 24 months of sampling and testing, which was prematurely ended after 19 months without notice. The results for the 19 months of sampling that were completed resulted in an extremely low concentration of cryptosporidium oocysts per liter. Barring a significant change in the testing results in the final five months that was missed, MU would have needed "no additional treatment", according to ADEM regulations. MU plans to restart cryptosporidium sampling and testing no later than June 2020.

Should you have any questions concerning this non-compliance or monitoring requirements, please contact:

Jason Leggett, 101 Ray Sanderson Drive, Madison, AL 35758, (256) 772-0253

YOUR WATER UTILITY BY THE NUMBERS

Your water utility is comprised of many working parts that are maintained to protect water quality and ensure water is available every time you turn on your faucet. From the pumps that pull water from the Tennessee River to the valves that isolate sections of the system to help limit service interruptions during line maintenance and repairs, your water utility is a sophisticated mix of hardware and dedicated employees who keep your water clean, reliable, and affordable.

Employees: 55

Water Sources: 7

Water Reservoirs: 4

Waterlines: 335 mi

Water Valves: 4542

Fire Hydrants: 2686

HOW HARD IS YOUR WATER?

If substantial amounts of Calcium or Magnesium are present in drinking water, the water is said to be hard. Water containing little Calcium or Magnesium is called soft water. The water in Madison was previously moderately hard due to limestone rock formations in this area. Now that the river intake is the primary water source, the water in Madison is relatively soft.

www.MadisonUtilities.org

KEY TO TABLES

AL (Action Level) - concentration of a contaminant that triggers treatment/other action by a water system.

MCL (Maximum Contaminant Level) - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

MCLG (Maximum Contaminant Level Goal) - The level of a contaminant in drinking water below which there is no known or expected risk to health.

MD - Maximum Detected

MRDL (Maximum Residual Disinfectant Level) - the highest level of a disinfectant allowed in drinking water.

MRDLG (Maximum Residual Disinfectant Level Goal) - The level of a disinfectant below which there is no known

or expected risk to health.

N/A—not applicable

ND - Not Detected

pcu - color units

pCi/l - picocuries per liter

ppm - parts per million

ppb - parts per billion

ppt - parts per trillion

NTU - nephelometric turbidity unit

s.u. (standard unit) - pH is measured on a logarithmic scale, ranging from 0 to 14 s.u., with 7 s.u. being neutral.

TON - threshold odor number

TT (Treatment Technique) - A required process intended to reduce the level of a contaminant in drinking water.

Este informe contiene información importante sobre la calidad de su agua potable. Por favor lea este informe o comuníquese con alguien que pueda traducir la información.
