

Current Events

- Madison Utilities is installing a new 24-inch water transmission main from Highway 72 to Gillespie Road to connect with the previous phase of the line and improve service to the growing northern portion of our system. Construction will occur in phases and require temporary lane and road closures, all of which have been approved by the City of Madison; questions regarding closures should be directed to the City. Tree removals along the eastern side of the corridor are within existing easements and rights-of-way, which utilities are authorized to clear for construction.
- Congratulations to the newly elected City of Madison officials! Madison Utilities looks forward to working together to achieve shared goals that serve the best interests of our community's ratepayers and taxpayers.

Seasonal Tips

- **Last call for leaks.** Fall is an important time to inspect and repair any water leaks before winter arrives. Unaddressed leaks can create safety hazards and are likely to worsen during the freeze-thaw cycles of colder months. Taking care of them now helps protect your home and plumbing system throughout the winter season.
- **Know your sewer cleanout.** Your sewer cleanout is an access point located on your property between your home and the utility's main line. It allows you to clear blockages and inspect the condition of your sewer line. If you're unsure where your cleanout is, contact a plumber to help you locate it.
- **Don't forget to check the batteries in your smoke detectors.**
